

ITEC PROGRAMME EXPERIENCE

BY

FRIDAH NG'UNI

SENIOR PLANNER – POLICY AND BUDGETING

MINISTRY OF ENERGY

Introduction

- I am humbled and honored to be part of this important event and the opportunity I have been given to share my experience going to India under the ITEC Programme.
- I went to India under the programme called Energy systems Security and net zero emission.
- Firstly I was welcomed and security was provided for all the participants.
- The programme was taken with utmost seriousness in that we were taught by knowledgeable facilitators

About the Course

- This is a very important course as Energy is a key driver of the economy and it is therefore important as country to have security supply of energy.
- The programme focused on sustainability and the use of Renewable and clean energy.
- I found the course to be very relatable to what the country is facing currently and that it is in line with the Energy Policy, the 8th National Development Plan, the Vision 2030 e.t.c

Why sustainability?

- Meeting the needs of the present without compromising the ability of future generations to meet their needs

Why clean energy?

- Access to clean energy improves the quality of life
- The world is experiencing a common problem of climate change, therefore Increasing clean and renewable energy consumption is a way of reducing carbon emissions.
- As a country we are privileged to have a number of renewable energy resources such as solar, wind, hydro and geothermal heat.

Government of Zambia Policy

- It is for this reason that Government has put in place policies that enable private sector investment, awareness among the community and collaboration with countries with experience in dealing with climate change using mitigation and adaptation synergies.

धन्यवाद!

Thank you
